

# Subnetting in CISCO packet Tracer

Ques: Implementation of subnetting in CISCO packet Tracer simulator.

a) Draw your implementation of subnetting

b) Write down your understanding of subnetting.

classless IP subnetting is a technique that allows for more efficient use of IP addresses by allocating subnet masks that are not just the default masks for each IP class. This ~~make~~ means that we can divide our IP address space into smaller subnets.

Q) What is the advantage of Implementation with a network?

Subnetting is useful when we have a limited number of IP address but need to create multiple networks. This also enhance security.

Result:

Thus, subnetting has been implemented in CISCO packet Tracer and O/P is verified.
